

Sea Level Rise & Waste Water Infrastructure - Current California Guidance and Strategies
Jul 15, 2019

Article

Author, *The Water Report* - No. 185, July 15, 2019

As with most climate change initiatives, California is uniquely positioned in the sea level rise adaptation experiment. With over 3,000 miles of diverse tidal coastline, California is one of the states expected to be most affected by sea level rise. According to the California Fourth Climate Change Assessment, sea level rise could cause over \$17 billion in damage to residential and commercial buildings by 2100.
